

WHAT IS CLAIMED IS:

1. A lamp shade, comprising:

a shade;

a first ring fixed on a first end of the shade;

5 a second ring fixed on a second end of the shade; and

a support structure mounted in the shade and located between the first ring and the second ring for supporting the shade, wherein:

the support structure includes a main frame mounted between the first ring and the second ring to stretch the shade, and a support portion
10 mounted on the main frame.

2. The lamp shade in accordance with claim 1, wherein the main frame is substantially inverted U-shaped.

3. The lamp shade in accordance with claim 1, wherein the main frame has a first portion formed with two bent urging portions each urged on a
15 periphery of the first ring.

4. The lamp shade in accordance with claim 1, wherein the second ring has a periphery formed with a plurality of locking sockets, and the main frame has a second portion formed with two locking ends each locked in either one of the locking sockets of the second ring.

20 5. The lamp shade in accordance with claim 1, wherein the support structure further includes a plurality of support bars mounted between the first ring and the second ring.

6. The lamp shade in accordance with claim 5, wherein each of the support bars has a bent urging portion urged on a periphery of the first ring.

7. The lamp shade in accordance with claim 5, wherein the support portion has a periphery formed with a plurality of locking holes, and each of the support bars has a first end formed with an insert inserted into a respective one of the locking holes of the support portion.

8. The lamp shade in accordance with claim 5, wherein each of the support bars is substantially inverted L-shaped.

9. The lamp shade in accordance with claim 5, wherein the second ring has a periphery formed with a plurality of locking sockets, and each of the support bars has a second end formed with a locking end locked in a respective one of the locking sockets of the second ring.

10. The lamp shade in accordance with claim 1, wherein the support portion is ring-shaped and is mounted on the main frame by soldering.

11. The lamp shade in accordance with claim 1, wherein the support structure is foldable.

12. The lamp shade in accordance with claim 1, wherein the shade is made of flexible material.
